Microsoft Most Valuable Professional (MVP) · Aug 2026 – Aug 2027 · Credly verified

Microsoft MVP and Senior Full Stack .NET Developer with 11 years of experience designing, enhancing and supporting business-critical applications using C#, ASP.NET Core, Web API, Angular, React and SQL Server. Delivered robust solutions across e-commerce, healthcare, aviation, government and trade-related workflows, working closely with business analysts, product owners and operational users from requirements through testing, release and production support. Strong experience with Azure, messaging, CI/CD, automated testing and peer review, with a record of improving development processes, contributing to architecture and mentoring engineers.

SKILLS

- 1. Languages & Frameworks:** C#, .NET 8/10, ASP.NET Core, ASP.NET MVC, Web API, Microservices, CQRS, Entity Framework Core, LINQ, Python, JavaScript, TypeScript, Angular, React, Vue.js, SignalR, REST API, GraphQL
- 2. Cloud & Azure Services:** Azure App Services, Azure Functions, Azure API Management, Azure Service Bus, Azure Blob Storage, Azure SQL, Azure Data Lake, Azure OpenAI, Azure Application Insights, Azure AD/B2C, OAuth 2.0, OpenID Connect, Azure DevOps, GitHub Actions
- 3. Infrastructure as Code:** Terraform, Bicep, Docker, CI/CD pipelines, environment automation, release management, Azure resource provisioning
- 4. Databases & Caching:** Microsoft SQL Server, Azure SQL, Azure Managed Redis, Redis, Oracle, MongoDB, Elasticsearch, Couchbase
- 5. AI, Python & Automation:** Python, AI libraries, Azure OpenAI, GitHub Copilot, CodeRabbit, workflow automation, intelligent APIs, prompt-based service integration
- 6. Architecture & Patterns:** Object-Oriented Design, MVC, MVVM, n-tier architecture, event-driven architecture, microservices, API gateway patterns, multi-tenant SaaS
- 7. Frontend & UI:** Angular Material, Tailwind CSS, RxJS, Vuex, responsive web design, Figma-to-UI implementation
- 8. Testing & Delivery:** MSTest, NUnit, xUnit, Cypress, Selenium, Jest, SonarQube, Agile, Scrum, code reviews, technical mentoring, technical leadership

EXPERIENCE

SENIOR FULL STACK .NET ENGINEER | DATASERVE CORP | JAN 2025 – Present

DataServe Corp builds healthcare and US ecommerce software on Azure. Role covers product delivery on multi-store ecommerce platforms and healthcare claims systems, plus secure .NET microservices and AI-assisted automation.

- **Role and Ownership:** Owned end-to-end delivery for US ecommerce and healthcare product streams on .NET 8 and .NET 10: backlog grooming with product owners, technical design, implementation, code review, and production releases
- **Ecommerce Admin App:** Built and extended the Admin application (ASP.NET Core, Web API, Angular) for catalogue, pricing, orders, inventory, store configuration, users and roles, and day-to-day operations across tenants from one control plane
- **Ecommerce Multi-Store Websites:** Delivered customer-facing US storefronts from a single dynamic application that serves multiple stores with per-tenant branding, catalogues, checkout, and configuration, with no separate codebase per store
- **Angular UI and Workflows:** Built responsive Angular administration workflows with reusable grids, filtering, sorting, validation and role-based actions, translating product requirements and Figma designs into Angular Material and RxJS components

- **Healthcare Claims Processing:** Built and maintained Azure Functions pipelines to ingest, validate, transform, and process healthcare claims data at scale, using Azure Service Bus for async hand-off between claim stages
 - **Healthcare Platform and Integrations:** Supported related healthcare services: secure ASP.NET Core APIs, Azure SQL and Data Lake datasets for reporting, Application Insights for claim-job tracing, and Azure API Management for controlled partner access
 - **AI and Automation:** Integrated Azure OpenAI and Python libraries to automate repetitive internal workflow steps around claims review and operations tooling
 - **AI Code Review Tools:** Integrated GitHub Copilot and CodeRabbit with Azure DevOps pull requests so AI review comments appear on PRs, improving review speed and consistency across the team
 - **Cloud and Reliability:** Used Azure Managed Redis for session and data caching, Terraform and Bicep for environment provisioning, and Azure DevOps CI/CD for repeatable releases
 - **Leadership:** Mentored mid-level engineers, led design reviews for multi-tenant ecommerce features, unblocked delivery across Admin and storefront workstreams, and aligned release plans with product and QA
- Technologies Used:** C#, .NET 8, .NET 10, ASP.NET Core, Web API, Entity Framework Core, Angular, TypeScript, Angular Material, RxJS, Azure Functions, Azure Service Bus, Azure API Management, Azure SQL, Azure Data Lake, Application Insights, Azure DevOps, xUnit

SENIOR FULL STACK .NET ENGINEER | SYSTEMS LIMITED | SEP 2023 – JAN 2025

Systems Limited delivers enterprise software for trade, logistics, and government. Role focused on the TDAP (Trade Development Authority of Pakistan) application suite: digital trade workflows, official forms, and microservices on .NET and Azure.

- **Role and Ownership:** Led backend and full-stack delivery on TDAP modules: requirement breakdown with analysts, API design, Angular UI work, integration testing, and release support through Azure DevOps
 - **TDAP Applications:** Delivered TDAP trade and compliance features using C#, ASP.NET Core, microservices, and CQRS, including status workflows, document handling, and service-to-service integrations used by trade officers
 - **Forms Platform (30+ Forms):** Designed, built, and enabled print/export for 30+ official TDAP forms inside the application: layout, data binding, validation, and generation so officers could complete, submit, and print forms directly from the system
 - **Officer Workflows:** Built Angular workflow screens with data grids, status filters and role-based actions used by trade officers to manage applications and compliance cases
 - **Full Stack Delivery:** Shipped Angular and ASP.NET Core features together, refined APIs from production feedback, and kept UI and backend contracts consistent across TDAP modules
 - **Real-Time and Search:** Added SignalR notifications for status updates and used Redis and Elasticsearch for high-read API and search workloads
 - **Quality and CI/CD:** Set up Azure DevOps pipelines with unit tests and SonarQube quality gates before release
 - **Leadership:** Guided junior developers on TDAP patterns, reviewed pull requests for consistency across form and microservice modules, and coordinated with business analysts on form and workflow requirements
- Technologies Used:** C#, ASP.NET Core, Web API, CQRS, Angular, TypeScript, SQL Server, Azure DevOps, SonarQube, xUnit, SignalR, Redis, Elasticsearch

SENIOR FULL STACK .NET ENGINEER | CALROM PAKISTAN | AUG 2022 – SEP 2023

Calrom provides airline booking, check-in, and baggage software for carriers in the UK and internationally. Role covered booking APIs, front-end delivery, and production support for peak traffic.

- **Booking Platform:** Developed airline booking services with .NET Core Web API, SQL Server, and Vue.js/React front ends used by airline agents and passengers
- **API and Data Work:** Built and maintained REST endpoints and SQL Server queries for booking, availability, and related passenger flows with clear front-end contracts
- **Production Support:** Diagnosed and fixed live issues under peak booking load, reviewed pull requests, and supported services during peak booking periods
- **Monitoring:** Used Grafana and Prometheus with application logging for production troubleshooting and faster incident triage

- **Delivery Collaboration:** Collaborated with QA and product stakeholders to clarify acceptance criteria and ship stable booking features into release branches
- **Leadership:** Wrote technical notes, onboarded junior developers onto booking modules, and shared operational runbooks for incident response

Technologies Used: C#, .NET Core, Web API, SQL Server, Vue.js, React, Azure DevOps

SENIOR SOFTWARE ENGINEER | PUNJAB INFORMATION TECHNOLOGY BOARD (PITB) | SEP 2020 – AUG 2022

PITB supports Punjab government departments with e-governance, electronic filing, and document automation. Role focused on office automation products used daily by department staff.

- **Electronic Filing Product:** Built Electronic Filing and document management features with ASP.NET Web API and SharePoint workflows for government case and file handling
- **Workflow Automation:** Implemented routing, approvals and status tracking so departmental files moved through defined stages instead of informal email chains
- **Collaboration Features:** Added version control, shared editing, and secure document exchange so departments could collaborate without email-based file sharing
- **UI and Adoption:** Improved screens and navigation based on user feedback so non-technical staff could complete filing tasks with less training
- **Delivery and Mentoring:** Joined sprint planning and stand-ups, supported peers on Web API and SharePoint patterns, and kept delivery aligned with department priorities

Technologies Used: C#, ASP.NET Web API, SharePoint, SQL Server, JavaScript, HTML/CSS

SOFTWARE ENGINEER | FAUJI FOUNDATION | AUG 2016 – AUG 2020

Fauji Foundation runs industrial and welfare operations with internal document, project, and HR systems. Role covered eOffice delivery, office automation, and leave workflows across affiliated organisations.

- **eOffice Product:** Developed and rolled out an eOffice system with ASP.NET, DevExpress, SQL Server, and Bootstrap for internal document and project workflows
- **Office Automation System:** Built an Office Automation System (OAS) with ASP.NET MVC, Web Forms, and DevExpress for day-to-day administrative tasks across affiliated teams
- **HR Workflows:** Created leave-request workflows with role-based access using .NET and ADO.NET, covering request, approval, and status visibility for staff and managers
- **Data and Reporting Support:** Designed SQL Server structures and queries that backed operational screens and basic managerial reporting inside the office systems
- **Adoption Support:** Provided user support, bug fixes, and training after go-live so teams could switch from paper-heavy processes with confidence

Technologies Used: C#, ASP.NET, ASP.NET MVC, DevExpress, SQL Server, Bootstrap

AWARDS & RECOGNITION

Microsoft Most Valuable Professional (MVP)

Microsoft | Aug 2026 – Aug 2027

Awarded by Microsoft for technical expertise and community contribution across the Microsoft technology ecosystem. Official Credly digital badge authorised for professional use.

EDUCATION

Master of Science in Data Science

University of Salford, United Kingdom

January 2025 – April 2026

Bachelor of Science in Telecommunication Engineering

COMSATS University, Pakistan

September 2012 – September 2016
